FW-3150 Vacuum accessories operation and Maintenance

Works with the vacuum canister and vacuum stopper

1. Put the food into the vacuum canister, mark the storage date on the cover
2. Connect the canister with vacuum tube, make sure both ends of the vacuum tube tightly, in case of air leaking out when vacuuming the canister.
3. First press can button and then press the vacuum sealing button, when it finished, the indicator will light off.
4. Pay attention to the heating wire, when the motor sound disappeared, heating start.

5. Gently pull out the vacuum tube.
6. When the cover of the vacuum canister can not open, it means already in a vacuum situation.

How to operate with the vacuum canister and the vacuum stopper

1. Take the wine stopper on the bottleneck, Use the vacuum tube to connect the stopper let the machine power on.

2. Press the button "vacuum can". It will work automatically.

Cleaning and Maintenance

Cleaning:

Take off the plug, avoid the water. use the dishcloth to wash the gasket and the drip tray.

The gasket on the cover of the machine is fixed, don't take it down to wash it.
The gasket can be washed with soap water or cleanser essence.

Take the drip tray and wash it after vacuuming sauced or succulent food.

! ATTENTION

If long time no use, open the upper cover of the vacuum machine to avoid the impact of the deformation of the sponge.

FW-3150 Vacuum Sealer Breakdown& Maintenance

Situations

Solutions

Sealing indicator light flashing

Product overheating, Please stop for 20 seconds between two adjacent cycles. Intensive continuous use will trigger the overheat protection system. The machine will automatic stop and flash red light . Please stop for 20 minutes to cool the product completely . Vacuum pump works over 120s , the machine will automatic stop and flashing red light (Please refer below chapter "Vacuum pump is running, but could not vacuum ").

Vacuum pump is running, but can not vacuum

If use the vacuum bag cut down from roll bag ,and both two sides not seal , please check the first sealing line flat or not . Leave 7cm space between food and bag edge .Place the embossed side of the bag face down on the machine. Please check the gasket ring if out of shape, the upper gasket ring if have food residue. Please check the bag if have fold. And please hold the two side of bag to keep bag in flat. If not use and two side lock not open, the gasket ring will out of shape and caused vacuum air tightness to reduce which will affect use. So please open two side lock button and machine for 30 minutes to help gasket ring instauration flexibility.

Gasket ring is loose or damaged

If it's under gasket ring, take out and clean, then install back. If it's upper gasket ring, Please wipe and install back then retry again. If still doesn't solve the problem. Please contact with our dealers.

The sealing effect is not good

Sealing the food with a small amount of liquid ,please press the "seal" button to seal again .if a large amount of liquid or pure liquid ,please frozen to solid ,then vacuum again. Please check the high temperature tape and sealing strip have food powder or residue. If have, please clean up. If bag is folding, please hold the two side of bag to keep bag in flat.

Indicator light does not light on control panel.

Please check if it have connect the power source or not. Please check if the power source switch is well or not . Please check the machine cover lock well or not .
